Net/X™ Web-Based Management System

- **Securely Monitor Your System from Any Computer with Web Access**
- **Fully Integrated Project Management Application**
- **Sophisticated Graphing and Reporting**
- **Create E-Mail and SMS Text Alerts and Notifications**
- **Monthly Summary Reports**

Flexible Scheduling

Dynamic Graphing

Project Management
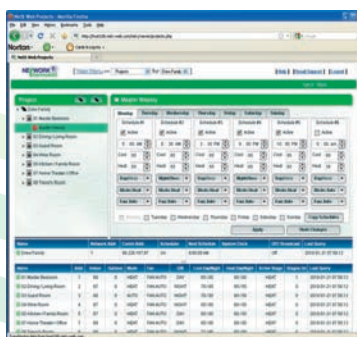

SMS Text & E-Mail Alerts

Monthly Usage

Adding Net/X-Web™ web-based management software greatly enhances the power of your new or existing Net/X™ HVAC Control System. It takes our already highly efficient system to the next level with even more control, management, reporting and savings. In addition to our famous point-and-click scheduling and real-time control, Net/X-Web™ provides a host of charts and graphs for dynamically viewing historical events and data. These features allow for the complete analysis of ever-changing HVAC environments, giving you the power to fine tune schedules and setpoints for even greater energy savings while maintaining comfort.
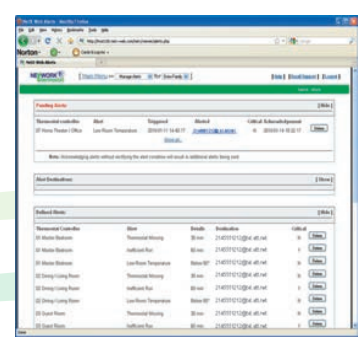

Management Console
This is your entrance to the Net/X Web management system. It helps you easily navigate through Graphs, Alerts, Projects, Reports, Account, PC Project Import, FAQ and Mobile application sections.

Project Scheduling
Accessed through the Projects button, set up every thermostat with its own specific program. Drag-n-drop and right-click functions allow 'PC' style functionality. Only Net/X-Web has it.
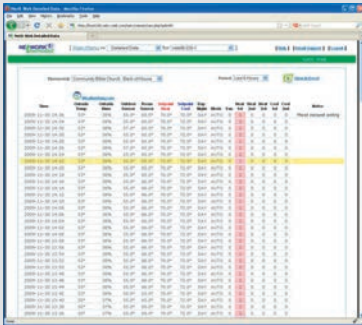

SMS Text & E-Mail Alerts
Define what's important to your project and let the system send notifications of an HVAC malfunction or unscheduled environment change via e-mail and/or text message to the user(s).

More Features of Net/X Web™

The Net/X-Web™ is browser based, allowing full thermostat real-time control, scheduling and monitoring, accessed in a multi-user environment, from any computer operating system: PC, Mac or even Linux. Net/X-Web supports all of the major browsers including Internet Explorer, Safari and Mozilla Firefox.

Plus, Net/X-Web™ has all of NetworkThermostat's familiar point-and-click, drag-and-drop ease of use that has simplified HVAC control for over a decade.

For all of NetworkThermostat's customers since 1995, migrating to Net/X-Web is as simple as using the one-button Import function, allowing each project to be pulled into the new service automatically.
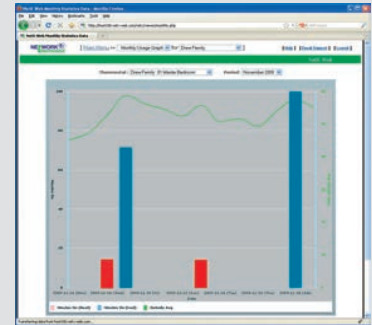

Detailed Data Reports
Net/X-Web captures all thermostat data every two minutes, whether you have one or thousands of Net/X units. View the data on the web or use the one-click export function to export to Excel.

Dynamic Graphs
Investigate the performance history of any thermostat, at any time period you prefer; simply grab the slider. View any combination of setpoints, room temp and outdoor temp & humidity.

Monthly Usage
See how many minutes each day each unit ran in heating and/or cooling mode. The chart also displays average outdoor temperature and degree-days for the month, allowing you to analyze and calculate energy savings.

Mobile
Net/X-Web also gives connection and control from any smart phone with a browser, including Windows Mobile 6+, Blackberry, iPhone, Google Android, and Treo 650+.

WeatherBug® Data
Includes accurate outside temperature and humidity data for each ZIP Code.

Three Choices to Match Your Needs

Graphing Package
Complete graphing and monthly usage reporting.

Includes the powerful Project Scheduling and Management tools.

Combo Package
Complete flexibility with all options, providing all of the benefits and power at a discount.

Alerts Package
Powerful real-time alerting via e-mail and text messaging. Includes temperature, inefficient run time, missing device alerts and more.

Includes the powerful Project Scheduling and Management tools.
