## NETWORK THERMOSTAT AND AMX PARTNER TO PROVIDE COMPREHENSIVE SOLUTION FOR HEATING AND COOLING CONTROL

Grapevine, TX, 03/23/2023— Network Thermostat™ (NetX), a leading provider of connected smart programmable thermostats for commercial applications and AMX, a leading manufacturer of video switching and control devices, announced today that they have joined forces to provide customers with a comprehensive solution for controlling heating and cooling systems in commercial and residential environments.

The partnership will see the release of an integration driver for AMX that enables the integration of Network Thermostat's X-Series smart[er] thermostats with AMX's control and automation systems. This integration will allow customers to use AMX's user interface devices, such as touch panels, keypads, and mobile apps, to control the thermostats, providing more convenience and ease of use.

"We are excited to partner with AMX to provide our customers with a comprehensive solution for managing and controlling heating and cooling systems of all types," said Jerry Drew, CEO of Network Thermostat. "The integration of AMX's control and automation systems with our X-series thermostats will provide customers with a more complete and convenient experience, while also allowing for advanced functionality and monitoring capabilities via the AMX products and ecosystem." ***Jerry Drew, Network Thermostat founder and CEO***

The integration of the NetX and AMX systems can control a variety of HVAC system types, including rooftops, forced-air splits, fan coil units, VAV and VVT systems, VRFs, and mini-splits. The AMX's NetLink controller communicates with NetX X-Series thermostats and wired and wireless remote sensors to provide valuable insights into how to optimize their heating and cooling systems for greater efficiency.

*“For more than forty years AMX’s networked technologies have been simplifying the experience for people controlling their environment and this collaboration with Network Thermostat is a perfect extension of that control for the benefit of our respective customers,” said Chris Backus, Director, Integrated Technologies Group, HARMAN Professional Solutions. “The Network Thermostat engineering team are network and HVAC domain experts which made the co-development of this solution exciting for AMX. We couldn’t be prouder of the outstanding results and trust our integrator customers will agree that we delivered a best-in-class product through this partnership.”*

### **About Network Thermostat**

At NetX, our mission is to provide effective energy-saving solutions to our customers through the use of communicating network thermostats. Headquartered in Grapevine, Texas, Network Thermostat is the industry-recognized leader with more than 30 years of design experience for connected building controls including custom protocol thermostats, Wi-Fi thermostats, and Ethernet thermostats.

NetX designs and manufactures in the USA. Over three decades, NetX has designed and produced thermostats for many of the world's largest thermostat and building automation brands. NetX's products place powerful, user-friendly tools in the hands of institutional, commercial, multi-family, and light industrial customers. Since 1995, Network Thermostat has been recognized as an industry pioneer and leader in cost-effective networkable HVAC solutions.

### **About AMX**

AMX ([amx.com](http://amx.com)) is an industry leading video control brand under HARMAN Professional Solutions. HARMAN Professional ([pro.harman.com](http://pro.harman.com)) engineers and manufactures audio, video, lighting and control products for entertainment and enterprise markets, including live performance, audio production, large venue, cinema, retail, corporate, education, government, hospitality, broadcast and more. With leading brands including JBL Professional®, AKG®, Martin®, AMX®, Soundcraft®, BSS Audio®, Crown®, dbx Professional®, and Lexicon Pro®, HARMAN Professional delivers powerful, innovative and reliable solutions that are designed for world-class performance. HARMAN Professional Solutions is a Strategic Business Unit of HARMAN International, a wholly-owned subsidiary of Samsung Electronics Co., Ltd.
